

Porcine - F

Natural Digestive Health Solution for Newborn Piglets

YES, THERE IS AN ALTERNATIVE!

Get your piglets on the right track from the start.

It is never too soon to give your newborn pigs the extra edge they need to get on the thriving curve. Give them Porcine-F right at processing.

Ready to use. No messy mixing, no diluting.

Porcine-F comes in a handy bottle with enough product for 220 piglets. A single administration of 2 ml of this ready-to-use solution, as part of the initial care of each piglet, is all it takes to give it the full benefit of Grazix.

Don't wait until you see the need.

The reality is, challenges to the digestive health of your pigs can start at birth. Why wait until the problems start growing in the farrowing house? Grazix Porcine-F has been shown in field trials around the world to help maintain normal digestive function in various challenging environments.

Innovation that goes straight to the bottom line.

Grazix Porcine-F is a careful blend of vitamin B1, known to alleviate the effects of stress, and LiveXtract®, a revolutionary technology developed by LiveLeaf®.

Safe, natural and economical.

The ingredients used in Grazix products are thoroughly tested and proven as a safe and effective alternative to help maintain natural digestive balance in pigs born and raised in challenging high-density production environments.

Product Ordering Information:

Net Contents: 450 ml (15.2 oz) per bottle

Product code: ITM-13412 (case of 12 bottles)

Get the most out of Grazix!

For maximum production benefits, we recommend that you combine the administration of Grazix Porcine-F to newborn piglets with the use of Grazix Porcine-W in the drinking water of the pigs during the stressful weaning and transition processes.

Porcine - F

Natural Digestive Health Solution for Newborn Piglets

Frequently Asked Questions

What is Porcine-F?

Grazix Porcine-F is a **nutritional supplement** specifically formulated to support the digestive health of newborn piglets. It contains vitamin B1, LiveXtract™ of pomegranate and LiveXtract™ of green tea.

How does Porcine-F work?

Vitamin B1 is known for alleviating the effects of stress on animals, especially on their digestive system. The LiveXtract technology builds on a solid scientific foundation of studies showing the benefits of polyphenols on digestive health, and takes their positive effects to the next level. Pomegranate and green tea have been selected for being recognized as safe, and for their high content in polyphenols. The polyphenols are bio-activated and stabilized by the LiveXtract process. As a result, they can deliver the full benefits of living plant immunity to the digestive tract of the animals.

How do I prepare and feed Porcine-F?

Porcine-F is ready to use. Just feed 2ml of solution directly in the mouth of the newborn piglet as soon as convenient after birth.

When should Porcine-F be fed?

For maximum benefits, Grazix Porcine-F should be fed to the newborn piglets as soon after birth as practical. Many producers find it most convenient to feed a one-time serving of 2ml at the time of processing, usually within the first two of three days after birth. Each bottle of Porcine-F contains enough product for 220 newborn piglets.

Which piglets should be fed Porcine-F?

Even though it is tempting to feed Porcine-F only to those animals that appear stressed, the biggest health and business benefits can only be obtained if the entire herd is protected by this powerful solution. Do not wait until you see symptoms of stress spreading in your barns: make Porcine-F a part of your standard operating procedure, and observe the returns.

Why should I use Porcine-F?

Porcine-F is a safe and effective alternative for maintaining the natural digestive health of your newborn piglets. Especially when used in combination with Porcine-W (for weaned pigs), it will help keep them on the thriving curve. Ask us for more details on how Grazix products work, how carefully they are manufactured and tested, and how they can help you optimize your production environment.
